NAS100 MARKET FOLLOW-UP

13 NOVEMBER 2026 / 6-HOUR / CONDITIONAL SCENARIO

THESIS

Conditional recovery developing from higher-timeframe support

STRUCTURE

NAS100 is reacting from 27,410-27,589 higher-timeframe support after declining from the 28,600 region. The rebound is constructive, but confirmation is still pending.

CONFIRMATION

Hold 27,410-27,589 and reclaim 28,009, followed by 28,734. Acceptance above both levels strengthens the larger recovery structure.

OBJECTIVES

A confirmed recovery supports 28,870, then 29,720-29,752 and 30,111. These are conditional objectives, not guaranteed outcomes.

INVALIDATION

The setup weakens below 27,174 and is invalidated below 27,086. Acceptance beneath that level exposes the deeper 26,456 support reference.

NAS100 MARKET FOLLOW-UP

13 NOVEMBER 2026 / 30-MINUTE / CONDITIONAL SCENARIO

THESIS

Intraday recovery supports the six-hour thesis while support holds

EXECUTION VIEW

The 30-minute chart shows a reaction from 27,600-27,728. This supports the six-hour recovery thesis while that intraday zone continues to hold.

NEAR-TERM TEST

Price must regain 27,913 and 28,123 before the larger 28,009-28,734 confirmation sequence can be treated as established.

RISK

A loss of 27,450 weakens the near-term reaction. The broader recovery remains invalid below the six-hour 27,086 structural level.

METHOD

The timeframes are read together: 6H defines location and risk; 30M tracks confirmation and execution quality.

Educational and informational purposes only. Not investment advice.
